

a) The Laspeyres indexes:  $q_s = q_0$  and  $p_s = p_0$

$$I_q^0 = \frac{\sum p_0 q_1}{\sum p_0 q_0} \quad I_p^0 = \frac{\sum p_1 q_0}{\sum p_0 q_0}$$

b) The Paasche indexes:  $q_s = q_1$  and  $p_s = p_1$

$$I_q^1 = \frac{\sum p_1 q_1}{\sum p_1 q_0} \quad I_p^1 = \frac{\sum p_1 q_1}{\sum p_0 q_1}$$

c) The Fischer indexes:

$$I_q^F = \sqrt{I_q^0 I_q^1} \quad I_p^F = \sqrt{I_p^0 I_p^1}$$

### Solution of practice problem 2

Indexes	Quantity index (%)	Price index (%)	Multiplication (%)
Laspeyres	95,3	182,3	173,7
Paasche	94,1	180,1	169,5
Fischer	94,7	181,2	171,6

Average formula:

$$I_v = \frac{\sum v_0 i_v}{\sum v_0}$$

$$I_q^0 = \frac{\sum v_0 i_q}{\sum v_0}$$

$$I_p^0 = \frac{\sum v_0 i_p}{\sum v_0}$$

$$I_v = \frac{\sum v_1}{\sum \frac{v_1}{i_v}}$$

$$I_q^1 = \frac{\sum v_1}{\sum \frac{v_1}{i_q}}$$

$$I_p^1 = \frac{\sum v_1}{\sum \frac{v_1}{i_p}}$$
