

NOTE

- *The motorcycle is equipped with a side stand switch. This switch is designed so that the engine stops if the clutch is engaged with the transmission in gear when the side stand is down.*

To set the motorcycle up on the center stand, step down firmly on the stand, and then lift the motorcycle up and to the rear using the grab rail as a hand-hold. Don't pull up on the seat to lift as this will damage the seat.

A. Center Stand
B. Step down.

C. Grab Rail
D. Lift up.
