

## **Cleaning of Exhaust System:**

### **CAUTION**

**To prevent surface damage, do not clean the exhaust system with chrome polishes or cleaners. Do not use waxes containing cleaners or abrasive cutting agents. Always use a soft cloth when washing and drying the system.**

### *Washing*

The exhaust system must be cooled before washing to prevent water spotting.

- Prepare a mixture of water and mild soap, such as dishwashing detergent. Do not use a high alkaline content soap as commonly found at commercial car washes because it leaves a residue.
- Wash the exhaust system with a soft cloth. Do not use an abrasive scouring

pad or steel wool. They will damage the finish.

- Rinse the exhaust system thoroughly.

### *Drying*

- Dry the exhaust system completely with a soft cloth. Do not run the engine to dry the system or spotting will occur.

### *Protecting*

- When the system is dry, apply a light coat of WD40, LPS-1, or Bel-Ray 6-in-1 multipurpose oil.
- Wipe off the excess oil.
- The system can be waxed instead of oiled. Use a carnauba type paste wax only. Do not use waxes containing cleaners or abrasive cutting agent. They will damage the finish. Apply wax according to the manufacturer's instructions.
